1309.0010 ADOPTION OF INTERNATIONAL RESIDENTIAL CODE (IRC) BY REFERENCE.

Subpart 1. Generally. The 2018 edition of the International Residential Code ("IRC") as promulgated by the International Code Council, Inc. ("ICC"), Washington, D.C., is incorporated by reference and made part of the Minnesota State Building Code except as qualified by the applicable provisions in Minnesota Rules, chapter 1300, and as amended in this chapter. Portions of this publication reproduce excerpts from the 2018 IRC, International Code Council, Inc., Washington, D.C., copyright 2017, reproduced with permission, all rights reserved. The IRC is not subject to frequent change and a copy of the IRC, with amendments for use in Minnesota, is available in the office of the commissioner of labor and industry.

Subp. 1a. Deleted appendices. All of the IRC appendices are deleted except Appendix K and Appendix Q.
Subp. 2. **Mandatory chapters.** The 2018 IRC chapters 2 to 10, 44, section P2904 of chapter 29, Appendix K, and Appendix Q shall be administered by any municipality that has adopted the Minnesota State Building Code, except as qualified by the applicable provisions in Minnesota Rules, chapter 1300, and as amended by this chapter.

Subp. 3. **Replacement chapters.** The following 2018 IRC chapters are being deleted and replaced with the provisions in items A to E:

A. Chapter 1 of the 2018 IRC is deleted and replaced as provided in Minnesota Rules, part 1309.0100, subpart 1.

B. Chapter 11 of the 2018 IRC and any references to residential or commercial energy in this code are deleted and replaced with Minnesota Rules, chapters 1322 and 1323, Minnesota Energy Code.

C. Chapters 12 to 24 of the 2018 IRC and any references to mechanical matters in this code are deleted and replaced with Minnesota Rules, chapter 1346, Minnesota Mechanical Code.

D. Chapters 25 to 33 of the 2018 IRC and any references to plumbing in this code are deleted and replaced with Minnesota Rules, chapter 4714, Minnesota Plumbing Code, except that section P2904 of IRC chapter 29 is not deleted.

E. Chapters 34 to 43 of the 2018 IRC and references to electrical matters in this code, other than sections R314 Smoke Alarms and R315 Carbon Monoxide Alarms, are deleted and replaced with Minnesota Rules, chapter 1315, Minnesota Electrical Code.

Subp. 4. [Repealed, 39 SR 91]

Subp. 5. **Flood hazard or floodproofing provisions.** Any flood hazard or floodproofing provisions in the IRC, and any reference to those provisions, are deleted in their entirety. Requirements for floodproofing are located in chapter 1335, floodproofing regulations.

Subp. 6. **Elevator and platform lift provisions.** Any elevator and platform lift provisions in the IRC and any reference to those provisions are deleted in their entirety. Requirements for elevators or platform lifts are located in chapter 1307, elevators and related devices.

**Statutory Authority:**  MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

**History:** 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 40 SR 71; 44 SR 764

1309.0020 **REFERENCES TO OTHER ICC CODES.**

Subpart 1. **Generally.** References to other codes and standards promulgated by the ICC in the 2018 IRC are modified in subparts 2 to 11.

Subp. 3. **Residential code.** References to the IRC in this code mean the Minnesota Residential Code, adopted under Minnesota Rules, chapter 1309, and Minnesota Statutes, section 326B.106, subdivision 1.

Subp. 4. **Electrical code.** References to the ICC Electrical Code in this code mean the Minnesota Electrical Code, Minnesota Rules, chapter 1315, adopted under Minnesota Statutes, section 326B.35.

Subp. 5. **Fuel gas code.** References to the International Fuel Gas Code in this code mean the Minnesota Mechanical Code, Minnesota Rules, chapter 1346, adopted under Minnesota Statutes, section 326B.106, subdivision 1.

Subp. 6. **Mechanical code.** References to the International Mechanical Code in this code mean the Minnesota Mechanical Code, Minnesota Rules, chapter 1346, adopted under Minnesota Statutes, section 326B.106, subdivision 1.

Subp. 7. **Plumbing code.** References to the International Plumbing code in this code mean the Minnesota Plumbing Code, Minnesota Rules, chapter 4714, adopted under Minnesota Statutes, section 326B.435.

Subp. 8. **Private sewage disposal code.** References to the International Private Sewage Disposal Code in this code mean the Minnesota Pollution Control Agency's minimum standards and criteria for individual sewage treatment systems in Minnesota Rules, chapter 7080, adopted under Minnesota Statutes, chapters 103F, 103G, 115, and 116.

Subp. 10. **Property maintenance code.** References to the International Property Maintenance Code in this code do not apply.

Subp. 11. **Accessibility code.** References to accessibility in this code mean the Minnesota Accessibility Code, Minnesota Rules, chapter 1341.

**Statutory Authority:** MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

**History:** 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 5 s 32; art 13 s 4; 39 SR 91; 40 SR 71; 44 SR 764

1309.0030 **ADMINISTRATIVE PROCEDURE CRITERIA.**

Procedures relating to the administration and enforcement of this code under Minnesota Statutes, section 326B.101, are contained in Minnesota Rules, chapter 1300, Minnesota Building Code Administration. Minnesota Rules, chapter 1300, governs the application of this code.

**Statutory Authority:** MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

**History:** 27 SR 1475; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91

1309.0040 [Repealed, 39 SR 91]
CHAPTER 1, ADMINISTRATION.

Subpart 1. IRC chapter 1. IRC chapter 1 is deleted and replaced with the following:

CHAPTER 1

ADMINISTRATION

This code shall be administered according to Minnesota Rules, chapter 1300.

Subp. 2. Existing buildings and structures. Additions, alterations, or repairs to existing buildings and structures meeting the scope of the International Residential Code shall be exempt from Minnesota Rules, chapter 1311, Minnesota Conservation Code for Existing Buildings.

Additions, alterations, or repairs to existing one- and two-family dwellings including townhouses may be made without requiring the existing building or structure to comply with all the requirements of this code provided that any addition or alteration conforms to this code. Repairs to existing buildings or structures may be made that are nonstructural and do not adversely affect any structural member or required fire-resistive element with the same methods and materials of which the building or structure is constructed.

Exception: The installation or replacement of glass shall be as required for new installations in accordance with IRC Section R308.

Subp. 3. Transient use. Buildings constructed for transient use and required to be licensed by any Minnesota state agency shall be constructed in accordance with the requirements for Group R occupancies located in Minnesota Rules, chapter 1305.

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 44 SR 764

1309.0201 SECTION R201, GENERAL.

IRC Section R201.4 is amended to read as follows:

R201.4 Terms not defined. Where terms are not defined through the methods authorized by this chapter, the Merriam-Webster Collegiate Dictionary, available at www.m-w.com, shall be considered as providing ordinarily accepted meanings. The dictionary is incorporated by reference, is subject to frequent change, and is available through the Minitex interlibrary loan system.

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.101; 326B.106; 326B.13

History: 27 SR 1475; L 2007 c 140 art 4 s 61; art 13 s 4

1309.0202 SECTION R202, DEFINITIONS.

Subpart 1. Modifications. IRC Section R202 is amended by modifying the following definitions:

DWELLING.
SINGLE-FAMILY. Any building that contains one dwelling unit used, intended, or designed to be built, used, rented, leased, let or hired out to be occupied, or occupied for living purposes.

TWO-FAMILY. Any building that contains two separate dwelling units with separation either horizontal or vertical on one lot that is used, intended, or designed to be built, used, rented, leased, let or hired out to be occupied, or occupied for living purposes.

TOWNHOUSE. A single-family dwelling unit constructed in a group of two or more attached units in which each unit extends from the foundation to the roof and having open space on at least two sides of each unit. Each single-family dwelling unit shall be considered to be a separate building. Separate building service utilities shall be provided to each single-family dwelling unit when required by other chapters of the State Building Code.

Subp. 2. Additional definitions. IRC section R202 is amended by adding the following definitions:

APPROVED. "Approved" means approval by the building official, pursuant to the Minnesota State Building Code, by reason of:

a. inspection, investigation, or testing;

b. accepted principles;

c. computer simulations;

d. research reports; or

e. testing performed by either a licensed engineer or by a locally or nationally recognized testing laboratory.

CODE. For purposes of this chapter, "the code" or "this code" means the Minnesota Residential Code, Minnesota Rules, chapter 1309.

CRAWL SPACE. Areas or rooms with less than 6 feet 4 inches (1931 mm) ceiling height measured to the finished floor or grade below.

FLASHING. Approved corrosion-resistive material provided in such a manner as to deflect and resist entry of water into the construction assembly.

FLOOR AREA. The calculated square footage of the floor within the inside perimeter of the exterior walls of the building under consideration without deduction for hallways, stairways, closets, the thickness of interior walls, columns, or other features.

KICK-OUT FLASHING. Flashing used to divert water where the lower portion of a sloped roof stops within the plane of an intersecting wall cladding.

OCCUPANCY CLASSIFICATIONS

IRC-1 - Single-family dwelling
IRC-2 - Two-family dwellings
IRC-3 - Townhouses

IRC-4 - Accessory structures:

   a. Garages;
   b. Storage sheds; and
   c. Similar structures.

SILL HEIGHT. The lowest part of the window opening of an operable window measured from the finished floor.

TRANSIENT. Occupancy of a dwelling unit or sleeping unit for not more than 30 days.

WATERPROOFING. Treatment of a surface or structure located below grade to resist the passage of water in liquid form, under hydrostatic pressure that bridges nonstructural cracks.

Statutory Authority:  MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History:  27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0300 SECTION R300, CLASSIFICATION.

IRC Chapter 3 is amended by adding a new section to read as follows:

R300.1 Occupancy classification. Structures or portions of structures shall be classified with respect to occupancy in one or more of the groups in accordance with Table R300.1.

<table>
<thead>
<tr>
<th>Table R300.1</th>

</thead>
<tbody>
<tr>
<td>Yes</td>
<td>See MR chapter 1335</td>
<td>See Table R403.3(2)</td>
<td>See Footnote &quot;j&quot;</td>
</tr>
</tbody>
</table>

For SI: 1 pound per square foot = 0.0479 kPa, 1 mile per hour = 0.447 m/s.

---

*a* Weathering may require a higher strength concrete or grade of masonry than necessary to satisfy the structural requirements of this code. The weathering column shall be filled in with the weathering index, such as "negligible," "moderate," or "severe," for concrete as determined from the Weathering Probability Map Figure R301.2(4). The grade of masonry units shall be determined from ASTM C 34, C 55, C 62, C 73, C 90, C 129, C 145, C 216, or C 652.

*b* See Minnesota Rules, part 1303.1600 -- Footing Depth for Frost Protection to verify whether the county requires Zone I or Zone II frost protection.

*c* The jurisdiction shall fill in this part of the table to indicate the need for protection depending on whether there has been a history of local subterranean termite damage.

*d* See wind speed map Figure R301.2(5)A. Wind exposure category shall be determined on a site-specific basis in accordance with Section R301.2.1.4.

*e* See Minnesota Rules, chapter 1322, Climate Data Design Conditions to verify by city.

*f* The ground snow loads to be used in determining the design snow loads for buildings and other structures are given in Minnesota Rules, part 1303.1700 - Ground Snow Load to verify by county. The roof snow load is a uniform load on the horizontal projection of the roof.

*g* See Minnesota Rules, chapter 1335, Flood Proofing Regulations.

*h* In accordance with Sections R905.1.2, R905.2.7, R905.4.3.1, R905.5.3.1, R905.6.3.1, R905.7.3.1, and R905.8.3.1, where there has been a history of local damage from the effects of ice damming.
1309.0301 INTERNATIONAL RESIDENTIAL CODE

The jurisdiction shall fill in this part of the table with the 100-year return period air freezing index (BF-days) from Figure R403.3(2) or from the 100-year (99 percent) value on the National Climatic Data Center data table "Air Freezing Index-USA Method (Base 32° F)" at www.ncdc.noaa.gov/sites/default/files/attachments/Air-Freezing-Index-Return-Periods-and-Associated-Probabilities.pdf.

The jurisdiction shall fill in this part of the table with the mean annual temperature from the National Climatic Data Center data table "Average Mean Temperature Index" at www.ncdc.noaa.gov/sites/default/files/attachments/Air-Freezing-Index-Return-Periods-and-Associated-Probabilities.pdf.

In accordance with Section R301.2.1.5.

Assigned to allow the application of the least restrictive topographic provisions of the code.

Subp. 3. IRC Figure R301.2(6). Figure R301.2(6), Ground Snow Loads, Pg, for the United States (lb/ft²), is deleted in its entirety.

Subp. 4. [Repealed, 39 SR 91]

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0302 SECTION R302, FIRE-RESISTANT CONSTRUCTION.

Subpart 1. IRC Tables R302.1(1) and R302.1(2). Table R302.1(1) and Table R302.1(2) are amended to read as follows:

**TABLE R302.1(1)**

**EXTERIOR WALLS**

<table>
<thead>
<tr>
<th>EXTERIOR WALL ELEMENT</th>
<th>MINIMUM FIRE-RESISTANCE RATING</th>
<th>MINIMUM FIRE SEPARATION DISTANCE</th>
</tr>
</thead>
<tbody>
<tr>

<td>Not fire-resistance rated</td>
<td>0 hours</td>
</tr>
<tr>
<td>Projections</td>
<td>Not allowed</td>
<td>NA</td>
</tr>
<tr>
<td></td>
<td>Fire-resistance rated</td>
<td>1 hour on the underside, or heavy timber, or</td>
</tr>
</tbody>
</table>
For SI: 1 foot = 304.8 mm.

NA = Not Applicable.

a The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the eave overhang if fireblocking is provided from the wall top plate to the underside of the roof sheathing.

b The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the rake overhang where gable vent openings are not installed.

c One hour on the underside equates to one layer of 5/8-inch type X gypsum sheathing. Openings are not allowed.

**TABLE R302.1(2)**

**EXTERIOR WALLS - DWELLINGS WITH FIRE SPRINKLERS**

<table>

<td>3 feet&lt;sup&gt;a&lt;/sup&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For SI: 1 foot = 304.8 mm.

NA = Not Applicable.

<sup>a</sup> For residential subdivisions where all dwellings are equipped throughout with an automatic sprinkler system installed in accordance with Section P2904, the fire separation distance for exterior walls not fire-resistance rated and for fire-resistance-rated projections shall be permitted to be reduced to 0 feet, and unlimited unprotected openings and penetrations shall be permitted, where the adjoining lot provides an open setback yard that is 6 feet or more in width on the opposite side of the property line.

<sup>b</sup> The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the eave overhang if fireblocking is provided from the wall top plate to the underside of the roof sheathing.

<sup>c</sup> The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the rake overhang where gable vent openings are not installed.

<sup>d</sup> One hour on the underside equates to one layer of 5/8-inch type X gypsum sheathing. Openings are not allowed.

**Subp. 2. IRC section R302.2.3, Continuity.** Section R302.2.3 is amended to read as follows:

**R302.2.3 Continuity.** The fire-resistance-rated wall or assembly separating townhouses shall be continuous from the foundation to the underside of the roof sheathing, roof deck, or roof slab. The fire-resistance rating shall extend the full length of the wall or assembly, including wall extensions through and separating attached enclosed accessory structures. The separation shall extend through enclosed soffits, overhangs, and similar projections.

**Subp. 2a. IRC section R302.2.7.** Section R302.2 is amended by adding a subsection to read as follows:
R302.2.7 Sound transmission. Townhouses constructed in accordance with Section R302.2 shall comply with the sound transmission requirements of IRC Appendix K.

Subp. 3. IRC section R302.3, Two-family dwellings. Section R302.3 is amended by adding a subsection to the end of the section to read as follows:

R302.3.2 Sound transmission. Two-family dwellings constructed in accordance with Section R302.3 shall comply with the sound transmission requirements of IRC Appendix K.

Subp. 4. IRC section R302.5.1, Opening protection. Section R305.5.1 is amended to read as follows:

R302.5.1 Opening protection. Openings from a private garage directly into a room used for sleeping purposes shall not be permitted. Other openings between the garage and residence shall be equipped with solid wood doors not less than 1-3/8 inches (35 mm) in thickness, solid or honeycomb-core steel doors not less than 1-3/8 inches (35 mm) thick, or 20-minute fire-rated doors.

Subp. 5. IRC section R302.6. Section R302.6 and Table R302.6 are amended to read as follows:

R302.6 Dwelling/garage fire separation. The garage shall be separated as required by Table R302.6. Openings in garage walls shall comply with Section R302.5.

**TABLE R302.6**

<table>
<thead>
<tr>
<th>SEPARATION</th>
<th>MATERIAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>From the residence and attics</td>
<td>Not less than 1/2-inch gypsum board or equivalent applied to the garage side. Vertical separation between the garage and the residence attic shall extend to the roof sheathing or rafter blocking.</td>
</tr>
<tr>
<td>From all habitable rooms above the garage</td>
<td>Not less than 5/8-inch type X gypsum board or equivalent.</td>
</tr>
<tr>
<td>Structural members supporting floor/ceiling assemblies or garage ceiling used for separation required by this section</td>
<td>Not less than 1/2-inch gypsum board or equivalent applied to the garage side of structural members supporting the floor/ceiling assemblies or garage ceiling. Structural members include, but are not limited to: walls, columns, beams, girders, and trusses.</td>
</tr>
<tr>
<td>Garages located less than 3 feet from a dwelling unit on the same lot</td>
<td>Not less than 1/2-inch gypsum board or equivalent applied to the interior side of exterior walls that are within this area. This provision does not apply to garage walls that are perpendicular to the adjacent dwelling unit wall.</td>
</tr>
</tbody>
</table>
For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

Attachment of gypsum board shall comply with Table R702.3.5.

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0303 SECTION R303, LIGHT, VENTILATION, AND HEATING.

Section R303.4 is amended to read as follows:

R303.4 Mechanical ventilation. Mechanical ventilation of a dwelling unit shall comply with either Minnesota Rules, chapter 1322 or 1346.

Statutory Authority: MS s 326B.02

History: 44 SR 764

1309.0305 SECTION R305, CEILING HEIGHT.

IRC section R305 is amended to read as follows:

R305.1 Minimum height, new buildings. Habitable space, hallways, bathrooms, toilet rooms, laundry rooms, and portions of basements containing these spaces shall have a ceiling height of not less than 7 feet (2134 mm). The required height shall be measured from the finish floor to the lowest projection from the ceiling.

Exceptions:

1. For rooms with sloped ceilings, at least 50 percent of the required floor area of the room shall have a ceiling height of at least 7 feet (2134 mm) and no portion of the required floor area may have a ceiling height of less than 5 feet (1524 mm).

2. Bathrooms shall have a minimum ceiling height of 6 feet 8 inches (2032 mm) at the center of the front clearance area for water closets, bidets, or sinks. The ceiling height above fixtures shall be such that the fixture is capable of being used for its intended purpose. A shower or tub equipped with a showerhead shall have a minimum ceiling height of 6 feet 8 inches (2032 mm) above a minimum area 30 inches (762 mm) by 30 inches (762 mm) at the showerhead.

R305.1.1 Basements, new buildings. Portions of basements that do not contain habitable space, hallways, bathrooms, toilet rooms, and laundry rooms shall have a ceiling height of not less than 6 feet 8 inches (2032 mm).

Exception: Beams, girders, ducts, or other obstructions may project to within 6 feet 4 inches (1931 mm) of the finished floor.

R305.2 Alterations to existing building basements. Alterations to portions of existing basements shall comply with the provisions of this section.
R305.2.1 Minimum ceiling height, existing buildings. Alterations to existing basements or portions thereof shall have a ceiling height of not less than 6 feet 4 inches (1931 mm), including beams, girders, ducts, or other obstructions.

R305.2.1.1 Bathroom plumbing fixture clearance. Bathrooms shall have a minimum ceiling height of 6 feet 4 inches (1931 mm) at the center of the front clearance area for water closets, bidets, or sinks. A shower or tub equipped with a showerhead shall have a minimum ceiling height of 6 feet 4 inches (1931 mm) above a minimum area 30 inches (762 mm) by 30 inches (762 mm) at the wall where the showerhead is placed. The ceiling may have slopes or soffits that do not infringe on the height required for the plumbing fixture.

R305.2.2 Minimum stairway headroom, existing buildings. Alterations to existing basement stairways shall have a minimum headroom in all parts of the stairway not less than 6 feet 4 inches (1931 mm) measured vertically from the sloped line adjoining the tread nosing or from the floor surface of the landing or platform on that portion of the stairway.

Exception: Where the nosings of treads at the side of a flight extend under the edge of a floor opening through which the stair passes, the floor opening shall be allowed to project horizontally into the required headroom a maximum of 4-3/4 inches (121 mm).

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 27 SR 1475; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91

1309.0307 SECTION R307, TOILET, BATH, AND SHOWER SPACES.

IRC section R307.1 is amended to read as follows:

R307.1 Space required. Plumbing fixtures shall be installed in accordance with Minnesota Rules, chapter 4714, Minnesota Plumbing Code.

Statutory Authority: MS s 326B.02; 326B.101; 326B.106

History: 39 SR 91; 40 SR 71

1309.0309 SECTION R309, GARAGES AND CARPORTS.

Subpart 1. IRC section R309.1, Floor surface. Section R309.1 is amended to read as follows:

R309.1 Floor surface. Garage floor surfaces may be concrete, asphalt, sand, gravel, crushed rock, or natural earth.

Subp. 2. IRC section R309.2, Carports. Section R309.2 is amended to read as follows:

R309.2 Carports. Carports shall be open on at least two sides. Carport floor surfaces may be concrete, asphalt, sand, gravel, crushed rock, or natural earth. Carports not open on at least two sides shall be considered a garage and shall comply with the provisions of this section for garages.
IRC section R309.4, Automatic garage door opening systems. Section R309.4 is amended to read as follows:

**R309.4 Automatic garage door opening systems.** All automatic garage door opening systems that are installed, serviced, or repaired for garages serving residential buildings shall comply with the provisions of Minnesota Statutes, sections 325F.82 and 325F.83.

Subp. 4. IRC section R309.5, Fire sprinklers. Section R309.5 is amended to read as follows:

**R309.5 Fire sprinklers.** Attached garages of two-family dwellings and townhouses shall be protected by fire sprinklers and installed in compliance with section R313.3.

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91

1309.0310 SECTION R310, EMERGENCY ESCAPE AND RESCUE OPENINGS.

Subpart 1. IRC section R310.1, Emergency escape and rescue opening required. Section R310.1 is amended to read as follows:

**R310.1 Emergency escape and rescue opening required.** Basements, habitable attics, and every sleeping room shall have not less than one operable emergency escape and rescue opening. Where basements contain one or more sleeping rooms, an emergency egress and rescue opening shall be required in each sleeping room, but not be required in adjoining areas of the basement. Emergency escape and rescue openings shall open directly into a public way, or to a yard or court that opens to a public way.

Exceptions:

1. Storm shelters and basements used only to house mechanical equipment not exceeding a total floor area of 200 square feet (18.58 m²).
2. Basements or basement bedrooms when the building is protected with an automatic sprinkler system installed in accordance with IRC Section P2904 or NFPA 13D.
3. Basements or basement bedrooms where the entire basement area, including all portions of the means of egress to the level of exit discharge, and all areas on the level of exit discharge that are open to the means of egress is protected with an automatic sprinkler system in accordance with IRC Section P2904 or NFPA 13D.

(Section R310.1.1 remains unchanged.)

Subp. 2. IRC section R310.2, Emergency escape rescue openings. Section R310.2 is amended by adding a subsection to read as follows:

**R310.2.5.1 Licensed facilities.** Windows in rooms used for foster care or day care licensed or registered by the state of Minnesota shall comply with the provisions of Section R310.2.5, or all of the following conditions, whichever is more restrictive:

1. Minimum of 20 inches in clear opening width;
2. Minimum of 20 inches in clear opening height;
3. Minimum of 648 square inches (4.5 square feet) clear opening; and
4. Maximum of 48 inches from the floor to the sill height.

Subp. 3. IRC section R310.6, Alterations or repairs of existing basements. Section R310.6 is amended and a subsection added to read as follows:

**R310.6 Alterations or repairs of existing basements.** An emergency escape and rescue opening is not required where existing basements undergo alterations or repairs.

R310.6.1 Sleeping rooms in existing basements. New sleeping rooms created in an existing basement shall be provided with emergency escape and rescue openings in accordance with Section R310.1.

**Exception:** Emergency escape and rescue openings are not required to be provided where the entire basement area, including all portions of the means of egress to the level of exit discharge, and all areas on the level of exit discharge that are open to the means of egress are protected with an automatic sprinkler system in accordance with IRC Section P2904 or NFPA 13D.

**Statutory Authority:** MS s 16B.39; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

**History:** 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0311 SECTION R311, MEANS OF EGRESS.

Subpart 1. IRC section R311.3.2, Floor elevations for other exterior doors. Section 311.3.2 is amended to read as follows:

**R311.3.2 Floor elevations for other exterior doors.** Doors other than the required egress door shall be provided with landings or floors not more than 7-3/4 inches (196 mm) below the top of the threshold.

**Exception:** A landing is not required if a stairway less than 30 inches (762 mm) in height is located on the exterior side of the door, provided the door does not swing over the stairway. The stairway height shall be measured vertically from the interior floor surface to the finished grade.

Subp. 2. IRC section R311.7.1, Width. Section R311.7.1 is deleted and replaced with the following:

**R311.7.1 Stairways; general.**

**R311.7.1.1 Stairways serving dwellings or accessory structures.** All stairways serving a dwelling or accessory structure, or any part thereof, shall comply with this section. This shall include exterior stairs from a dwelling or garage to grade and those stairs serving decks, porches, balconies, sun rooms, and similar structures.
Exceptions:

1. Stairs serving attics or crawl spaces.

2. Stairs that only provide access to plumbing, mechanical, or electrical equipment.

R311.7.1.2 Width. Stairways shall not be less than 36 inches (914 mm) in clear width at all points above the permitted handrail height and below the required headroom height. Handrails shall not project more than 4.5 inches (114 mm) on either side of the stairway and the minimum clear width of the stairway at and below the handrail height, including treads and landings, shall not be less than 31-1/2 inches (787 mm) where a handrail is installed on one side and 27 inches (698 mm) where handrails are provided on both sides.

Exception: The width of spiral stairways shall be in accordance with Section R311.7.10.1.

Subp. 3. IRC section R311.7.2, Headroom. Section R311.7.2 is amended to read as follows:

R311.7.2 Headroom. The minimum headroom in all parts of the stairway shall not be less than 6 feet 8 inches (2032 mm) measured vertically from the sloped line adjoining the tread nosing or from the floor surface of the landing or platform on that portion of the stairway.

Exceptions:

1. Where the nosings of treads at the side of a flight extend under the edge of a floor opening through which the stair passes, the floor opening shall be allowed to project horizontally into the required headroom a maximum of 4-3/4 inches (121 mm).

2. The minimum headroom for existing buildings shall be in accordance with Section R305.2.2.

3. The headroom for spiral stairways shall be in accordance with Section R311.7.10.1.

Statutory Authority: MS s 14.386; 14.388; 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 32 SR 12; 33 SR 807; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 39 SR 1003; 41 SR 762; 44 SR 764

1309.0312 [Repealed, 32 SR 12]

1309.0312 SECTION R312, GUARDS AND WINDOW FALL PROTECTION.

Subpart 1. IRC section R312.1.1, Where required. Section R312.1.1 is amended as follows:
R312.1.1 Where required. Guards shall be located along the open sides of floors, stairs, ramps, and landings that are located more than 30 inches (762 mm) measured vertically to the floor or grade below. Insect screening shall not be considered as a guard.

Subp. 2. IRC section R312.2, Window fall protection. Section R312.2 is amended to read as follows.

R312.2 Window fall protection. Window fall protection shall be provided in accordance with Sections R312.2.1 and R312.2.2.

R312.2.1 Window sills. In dwelling units, where the lowest part of the opening of an operable window is located more than 72 inches (1829 mm) above the finished grade or surface below, the lowest part of the window opening shall be a minimum of 36 inches (914 mm) above the finished floor of the room in which the window is located. Operable sections of windows shall not permit openings that allow passage of a 4-inch diameter (102 mm) sphere where such openings are located within 36 inches (914 mm) of the finished floor.

Exceptions:

1. Windows with openings that will not allow a 4-inch diameter (102 mm) sphere to pass through the opening when the window is in its largest opened position.

2. Openings that are provided with window fall prevention devices that comply with ASTM F 2090.

3. Windows that are provided with window opening control devices that comply with Section R312.2.2.

4. Replacement windows.

(Subsection R312.2.2 remains unchanged.)

Statutory Authority: MS s 326B.02; 326B.101; 326B.106

History: 39 SR 91; 44 SR 764

1309.0313 SECTION R313, AUTOMATIC FIRE SPRINKLER SYSTEMS.

IRC section R313 is amended to read as follows:

R313.1 Townhouse automatic fire sprinkler systems. An automatic residential fire sprinkler system shall be installed in townhouses.

Exceptions:

1. An automatic residential fire sprinkler system shall not be required to be installed in a two-unit townhouse, unless required by section R313.4.
2. An automatic residential fire sprinkler system shall not be required when additions or alterations are made to existing townhouses that do not have an automatic residential fire sprinkler system installed.

R313.1.1 Design and installation. Automatic residential fire sprinkler systems for townhouses shall be designed and installed in accordance with IRC section P2904 or NFPA 13D.

R313.2 One- and two-family dwellings automatic fire systems. An automatic residential fire sprinkler system shall not be required to be installed in one- and two-family dwellings, unless required by section R313.4.

R313.2.1 Design and installation. Automatic residential fire sprinkler systems shall be designed and installed in accordance with IRC section P2904 or NFPA 13D.

R313.3 Installation requirements. When an automatic sprinkler system is required in two-family dwellings, it shall be installed in accordance with IRC section P2904 or NFPA 13D.

Automatic sprinkler systems required in two-family dwellings and townhouse buildings shall be installed in accordance with the following:

1. Attached garages are required to have one dry head sprinkler located within 5 lineal feet of each door installed in the common wall separating the dwelling unit and the attached garage;

2. Attached covered patios, covered decks, covered porches, and similar structures are required to have automatic sprinklers with a minimum of one dry head for every 20 lineal feet (6.096 m) of common wall between the dwelling unit and the covered patio, covered deck, covered porch, or similar structure.

Exception: Attached roofs of covered patios, covered decks, covered porches, or similar structures that do not exceed 40 square feet (3,716 m²) of floor area.

R313.4 State-licensed facilities. One- and two-family dwellings and townhouse buildings containing facilities required to be licensed or registered by the state of Minnesota shall be provided with an automatic sprinkler system required by the applicable licensing provisions of that agency or according to this part, whichever is more restrictive.

Statutory Authority: MS s 16B.39; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13; L 2017 c 20 s 1

History: 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 41 SR 1399

1309.0314 SECTION R314, SMOKE ALARMS.

Subpart 1. IRC section R314.2.2, Alterations, repairs, and additions. Section R314.2.2 is amended to read as follows:

R314.2.2 Alterations, repairs, and additions. An individual dwelling unit shall be equipped with smoke alarms located as required for new dwellings when:
1. alterations, repairs (including installation or replacement of windows or doors), or additions requiring a building permit occur; or

2. one or more sleeping rooms are added or created in existing dwellings.

**Exceptions:**

1. Work involving the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition of an open porch or deck, or chimney repairs.

2. Installation, alteration, or repairs of plumbing, electrical, or mechanical systems.

**Subp. 2. IRC section R314.4, Interconnection.** Section R314.4 is amended by adding an exception to read as follows:

**Exception:** Interconnection of smoke alarms in existing areas shall not be required where alterations or repairs do not result in removal of interior wall or ceiling finishes exposing the structure.

**Subp. 3. IRC section R314.6, Power source.** Section R314.6 is amended by modifying the second exception to read as follows:

2. Smoke alarms installed in existing areas shall be permitted to be battery powered provided any alterations or repairs do not result in the removal of interior wall or ceiling finishes exposing the structure.

**Statutory Authority:** MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

**History:** 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0315 [Repealed, 32 SR 12]

1309.0315 SECTION R315, CARBON MONOXIDE ALARMS.

Subpart 1. **IRC section R315.2, Where required.** Section R315.2 is amended to read as follows:

**R315.2 Where required.** Carbon monoxide alarms shall be provided in accordance with sections R315.2.1 and R315.2.2.

**R315.2.1 New construction.** For new construction, every one-family dwelling unit, each unit in a two-family dwelling unit, and each townhouse dwelling unit shall be provided with an approved and operational carbon monoxide alarm where one or both of the following conditions exist:

1. The dwelling unit contains a fuel-fired appliance.

2. The dwelling unit has an attached garage with an opening that communicates with the dwelling unit.
R315.2.2 Alterations, repairs, and additions. An individual dwelling unit shall be equipped with carbon monoxide alarms located as required for new dwellings where:

1. alterations, repairs (including installation or replacement of windows or doors), or additions requiring a building permit occur; or

2. one or more sleeping rooms are added or created in existing dwellings.

Exceptions:

1. Work involving the exterior surfaces of dwellings, such as the replacement of roofing or siding, the addition of an open porch or deck, or chimney repairs.

2. Installation, alteration, or repairs of plumbing, electrical, or mechanical systems.

Subp. 2. IRC section R315.3, Location. Section R315.3 is amended to read as follows:

R315.3 Location. Carbon monoxide alarms in dwelling units shall be installed outside of and not more than 10 feet (3048 mm) from each separate sleeping area or bedroom. Alarms shall be installed on each level containing sleeping areas or bedrooms. Where a fuel-burning appliance is located within a bedroom or its attached bathroom, a carbon monoxide alarm shall be installed within the bedroom.

Subp. 3. IRC section R315.5, Interconnectivity. Section R315.5 is amended by modifying the exception to read as follows:

Exception: Interconnection of carbon monoxide alarms in existing areas shall not be required where alterations or repairs do not result in removal of interior wall or ceiling finishes exposing the structure.

Subp. 4. IRC section R315.6, Power source. Section R315.6 is amended by modifying the second exception to read as follows:

2. Carbon monoxide alarms installed in existing areas shall be permitted to be battery powered provided any alterations or repairs do not result in the removal of interior wall or ceiling finishes exposing the structure.

Statutory Authority: MS s 326B.02; 326B.101; 326B.106
History: 39 SR 91; 44 SR 764

1309.0315 INTERNATIONAL RESIDENTIAL CODE

1309.0316 IRC sections R320.1 and R320.1.1 are deleted in their entirety and replaced with the following:

IRC section R320, ACCESSIBILITY.
R320.1 Scope. Where there are four or more IRC-3 dwelling units or sleeping units in a single structure, the provisions for Group R-3 occupancies located in Minnesota Rules, chapter 1341, Minnesota Accessibility Code, shall apply.

Statutory Authority:  MS s 326B.02
History:  44 SR 764

1309.0321 SECTION R321, ELEVATORS AND PLATFORM LIFTS.

IRC sections R321.1, R321.2, and R321.3 are deleted and replaced with the following:

R321.1 Elevators, platform lifts. For elevator and platform lift requirements, see Minnesota Rules, chapter 1307, Elevators and Related Devices.

Statutory Authority:  MS s 326B.02
History:  44 SR 764

1309.0322  [Repealed, 32 SR 12]

1309.0323 SECTION R323, STORM SHELTERS.

IRC section R323 is deleted in its entirety.

Statutory Authority:  MS s 326B.02; 326B.101; 326B.106
History:  39 SR 91

1309.0326 SECTION R326, SWIMMING POOLS, SPAS, AND HOT TUBS.

IRC section R326 is deleted in its entirety.

Statutory Authority:  MS s 326B.02
History:  44 SR 764

1309.0402 SECTION R402, MATERIALS.

IRC Table R402.2 is amended to read as follows:

TABLE R402.2 MINIMUM SPECIFIED COMpressive STRENGTH OF CONCRETE

<table>
<thead>
<tr>
<th>TYPE OR LOCATION OF CONCRETE CONSTRUCTION</th>
<th>Weathering Potential(^b)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Negligible</td>
</tr>
<tr>
<td>Footings(^e,h)</td>
<td>5,000</td>
</tr>
</tbody>
</table>
Basement walls, foundations, and other concrete not exposed to the weather | 2,500 | 2,500 | 2,500<sup>c</sup>
---|---|---|---
Basement slabs and interior slabs on grade, except garage floor slabs | 2,500 | 2,500 | 2,500<sup>c</sup>
---|---|---|---
Basement walls, foundation walls, exterior walls, and other vertical concrete work exposed to the weather | 2,500 | 3,000<sup>d</sup> | 3,000<sup>d</sup>
---|---|---|---
Porches, carport slabs, and steps exposed to the weather, and garage floor slabs | 2,500 | 3,000<sup>d, e, f</sup> | 3,500<sup>d, e, f</sup>

For SI: 1 pound per square inch = 6.895 kPa.

a Strength at 28 days psi.

b See Table R301.2(1) for weathering potential.

c Concrete in these locations that may be subject to freezing and thawing during construction shall be air-entrained concrete in accordance with footnote "d."

d Concrete shall be air-entrained. Total air content (percent by volume of concrete) shall be not less than 5 percent or more than 7 percent.

e See Section R402.2 for maximum cementitious materials content.

f For garage floors with a steel-troweled finish, reduction of the total air content (percent by volume of concrete) to not less than 3 percent is permitted if the specified compressive strength of the concrete is increased to not less than 4,000 psi.

g Compressive strength ($f'_c$) of 2,500 psi, with an approved admixture that provides a water and vapor resistance at least equivalent to 5,000 psi concrete.

h Compressive strength ($f'_c$) of 5,000 psi is not required for post footings for decks or porches, wood foundations, slab-on-grade foundation walls, and footings for floating slabs.

**Statutory Authority:** MS s 326B.02; 326B.101; 326B.106

**History:** 39 SR 91; 44 SR 764

1309.0403 SECTION R403, FOOTINGS.

Subpart 1. **IRC section R403.1.4.1.** Section R403.1.4.1 is amended to read as follows:

**R403.1.4.1 Frost protection.** Footings shall not bear on frozen soil. Foundation walls, piers, and other permanent supports of buildings and structures not otherwise protected from frost shall be protected by one or more of the following methods:
1. Extended below the frost line specified in Table R301.2(1);
2. Constructing in accordance with Section R403.3;
3. Constructing in accordance with ASCE 32;
4. Erected on solid rock; or
5. Constructing in accordance with Minnesota Rules, chapter 1303.

Subp. 2. IRC section R403.1.6. IRC Section R403.1.6 is amended to read as follows:

**R403.1.6 Foundation anchorage.** Sill plates and walls supported directly on continuous foundations shall be anchored to the foundation in accordance with this section.

Wood sole plates at all exterior walls on monolithic slabs, wood sole plates of braced wall panels at building interiors on monolithic slabs, and all wood sill plates shall be anchored to the foundation with anchor bolts spaced a maximum of 6 feet (1829 mm) on center. Bolts shall be at least 1/2-inch (12.7 mm) in diameter and shall extend a minimum of 7 inches (178 mm) into concrete or grouted cells of concrete masonry units. A nut and washer shall be tightened on each bolt. There shall be a minimum of two bolts per plate section with one bolt located not more than 12 inches (305 mm) or less than 7 bolt diameters from each end of the plate section. Interior bearing wall sole plates on monolithic slab foundation that are not part of a braced wall panel shall be positively anchored with approved fasteners. Sill plates and sole plates shall be protected against decay and termites where required by Sections R317 and R318. Cold-formed steel framing systems shall be fastened to the wood sill plates or anchored directly to the foundation as required in Section R505.3.1 or R603.1.1. When vertical reinforcing is required by other sections of this code, the foundation anchor bolts shall be within 8 inches (203 mm) of the vertical reinforcing. All anchor bolts installed in masonry shall be grouted in place with at least 1-inch (25 mm) of grout measured from the inside face of the masonry and the anchor bolt.

**Exceptions:**

1. Foundation anchor straps spaced as required to provide equivalent anchorage to 1/2-inch diameter (12.7 mm) anchor bolts. When vertical reinforcing is required by other sections of this code, the foundation anchor straps shall align with the reinforcing.

2. Walls 24 inches (609.6 mm) total length or shorter connecting offset braced wall panels shall be anchored to the foundation with a minimum of one anchor bolt located in the center third of the plate section and shall be attached to adjacent braced wall panels according to Figure R602.10.5 at corners.

3. Walls 12 inches (304.8 mm) total length or shorter connecting offset braced wall panels shall be permitted to be connected to the foundation without anchor bolts. The wall shall be attached to adjacent braced wall panels according to Figure R602.10.5 at corners.
SECTION R404, FOUNDATION AND RETAINING WALLS.

Subpart 1. IRC section R404.1. Section R404.1 is amended to read as follows:

R404.1 Concrete and masonry foundation walls. Concrete foundation walls shall be selected and constructed in accordance with the provisions of Section R404.1.2. Masonry foundation walls shall be selected and constructed in accordance with the provisions of Section R404.1.1. Concrete and masonry foundation walls shall be laterally supported at the top and bottom. Foundation walls that meet all of the following shall be considered laterally supported:

1. Full basement floor shall be 3.5 inches (89 mm) thick concrete slab poured tight against the bottom of the foundation wall.

2. Floor joists and blocking shall be connected to the sill plate at the top of wall with an approved connector with listed capacity meeting the top of wall reaction in Table R404.1(1). Maximum spacing of floor joists shall be 24 inches on center. Spacing of blocking shall be in accordance with Table R404.1(1).

3. Bolt spacing for the sill plate shall be no greater than the requirements in Table R404.1(1).

4. The floor shall be blocked perpendicular to the floor joists. Blocking shall be installed in accordance with footnote "e" of Table R404.1(1).

Exception: Cantilevered concrete and masonry foundation walls supporting unbalanced backfill that do not have permanent lateral support at the top of the foundation shall be constructed according to Table R404.1.1(5), Table R404.1.1(6), or Table R404.1.1(7).

(For subsection R404.1.1, see subpart 9. Subsections R404.1.2 through R404.1.9 and their subsections remain unchanged.)

Subp. 2. IRC Table R404.1(1). Section R404.1 is amended by adding Table R404.1(1) to read as follows:

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

a Soil classes are in accordance with the Unified Soil Classification System. Refer to table R405.1.

b Anchor bolts shall be cast in place with a minimum 7-inch embed. Where vertical reinforcing is required by other sections of this code, the anchor bolts shall be within 8 inches of the vertical reinforcing and are to be spaced as required by this table. Anchor bolts installed in masonry shall be grouted in place with not less than 1 inch of grout measured from the inside face of the masonry and the anchor bolt.

c The sill plate shall be 2 x 6 minimum. Anchor bolts shall be placed at least 2-1/2 inches from the edge of the sill plate and the edge of the foundation wall.

d Anchor bolts shall have a 2-inch by 1/8-inch thick round or square washer tightened and countersunk 1/4 inch into the top of the sill plate. Use of standard and noncountersunk washers is permitted where anchor bolt spacing is half the spacing required by this table.

e Minimum load to be used for the sizing of accepted anchors or fasteners if anchor bolts are not used.

f Perpendicular blocking shall be 2-by the full depth joists or an approved alternative full depth joist material that is installed in the first three joist spaces adjacent to the foundation wall. The blocking shall be connected to the sill plate with an approved fastener sized in accordance with footnote "e." The floor sheathing shall be nailed to the blocking through the subfloor with a
minimum of 8d common (2-1/2 x 0.131) nails at 3 inches on center or an equivalent connector. Blocking shall be installed within 8 inches of an anchor bolt location.

<sup>a</sup> Mortar shall be Type M or S and masonry shall be laid in running bond. Minimum unit compressive strength is 1,900 psi.

<sup>b</sup> Alternative reinforcing bar sizes and spacings having an equivalent cross-sectional area of reinforcement per lineal foot of wall shall be permitted provided the spacing of the reinforcement does not exceed 72 inches.

<sup>c</sup> Vertical reinforcement shall be Grade 60 minimum. The distance from the face of the soil side of the wall to the center of vertical reinforcement shall be no greater than 2.5 inches.

<sup>d</sup> Soil classes are in accordance with the Unified Soil Classification System. Refer to Table R405.1.

<sup>e</sup> Interior concrete floor slab-on-grade shall be placed tight to the wall. The exterior grade level shall be 6 inches minimum below the top of wall. Maximum height from top of slab-on-grade
to bottom of floor joists is 10 feet, 0 inches. Unbalanced backfill height is the difference in height of the exterior finish ground levels and the top of the interior concrete slab-on-grade.

Minimum footing size of 20 inches by 8 inches shall be placed on soil with a bearing capacity of 2,000 psf. Minimum concrete compressive strength of footing shall be 3,000 psi.

Provide propped cantilever wall: top of footing shall be 16 inches below the bottom of the concrete floor slab minimum.

Provide #5 Grade 60 dowels, 1 foot, 6 inches long, to connect footing to wall. Embed dowel 5 inches into footing. Place dowels in center of wall thickness spaced at 32 inches on center maximum. No dowels are required where length of the foundation wall between perpendicular walls is two times the foundation wall height or less.

This table is applicable where the length of the foundation wall between perpendicular walls is 35 feet or less, or where the length of the foundation laterally supported on only one end by a perpendicular wall is 17 feet or less.

Maximum wall height is measured from top of the foundation wall to the bottom of the interior concrete slab-on-grade.

Install foundation anchorage per Section R403.1.6.

Install foundation anchorage per Section R403.1.6.

Subp. 9. IRC section R404.1.1. Section R404.1.1 is amended by adding the following exception to condition 2:

**Exception:** Cantilevered concrete and masonry foundation walls constructed in accordance with Table R404.1.1(5), R404.1.1(6), or R404.1.1(7).

Statutory Authority: MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

History: 27 SR 1475; 32 SR 12; L 2007 c 140 art 4 s 61; art 13 s 4; 39 SR 91; 44 SR 764

1309.0406 SECTION R406, FOUNDATION WATERPROOFING AND DAMPPROOFING.

Subpart 1. IRC section R406.1. Section R406.1 is deleted in its entirety.

Subp. 2. IRC section R406.2. Section R406.2 is amended to read as follows:

**R406.2 Concrete and masonry foundation waterproofing.** Exterior foundation walls that retain earth and enclose below grade interior spaces, floors, and crawl spaces shall be waterproofed. Waterproofing shall be installed at a minimum from the top of the footing to the finished grade or in accordance with the manufacturer's installation instructions. Walls shall be waterproofed in accordance with one of the following:

1. 2-ply hot-mopped felts.
2. 55 pound (25 kg) roll roofing.
3. 6-mil (0.15 mm) polyvinyl chloride.
4. 6-mil (0.15 mm) polyethylene.
5. 40-mil (1 mm) polymer-modified asphalt.
6. 60-mil (1.5 mm) flexible polymer cement.
7. 1/8-inch cement based, fiber reinforced, waterproof coating.
8. 60-mil (1.5 mm) solvent free liquid applied synthetic rubber.

**Exception:** Organic solvent-based products such as hydrocarbons, chlorinated hydrocarbons, ketones, and esters shall not be used for ICF walls with expanded polystyrene form material. Use of plastic roofing cements, acrylic coatings, latex coatings, mortars, and pargings to seal ICF walls is permitted. Cold-setting asphalt or hot asphalt shall conform to Type C of ASTM D 449. Hot asphalt shall be applied at a temperature of less than 200° F (90° C).

All joints in membrane waterproofing shall be lapped and sealed with an adhesive compatible with the membrane.

**Statutory Authority:** MS s 16B.59; 16B.61; 16B.64; 326B.02; 326B.101; 326B.106; 326B.13

<sup>a</sup> Indicates a note or special condition not fully visible in this text.
C  NA\textsuperscript{a}  NA\textsuperscript{a}  2x8  2x8
24  B  NA\textsuperscript{a}  NA\textsuperscript{a}  2x8  2x8
C  NA\textsuperscript{a}  NA\textsuperscript{a}  NA\textsuperscript{a}  2x8

\textsuperscript{a} Design required.

\textsuperscript{b} Applicability of these tables assumes the following: SPF#2 or better, Ground snow = 60 psf, Roof snow = 42 psf, Component and Cladding Zone 4 - 50 square feet (Exposure B = 14.3 psf, Exposure C = 18.4 psf), eaves not greater than 2.0 feet in dimension.

c The exterior of the wall shall be continuously sheathed in accordance with one of the materials listed in items 30 to 36 in Table R602.3(1), including the prescribed fastening. All wall bracing requirements shall be in accordance with Section R602.10.

d Studs shall be continuous full height. Where studs do not extend full height due to a wall opening, full height studs shall be provided on each side of the opening, equal in number to the spacing of the required full height studs multiplied by half the width of the opening, plus one stud. Where multiple openings occur adjacent to one another, framing between openings shall include the total of all full height studs required for both openings combined.

e Full depth blocking is required at 10-foot spacing maximum.

f Utility, standard, stud, and No. 3 grade lumber of any species are not permitted.

\textsuperscript{g} This table is based on a maximum allowable deflection limit of L/120.

\textsuperscript{h} Where the sill plate of the frame wall bears on the supporting foundation and the frame wall is less than 12 feet in height, anchor the sill plate to the supporting foundation wall with 1/2-inch diameter anchor bolts spaced a maximum of 6 feet on center. For frame walls more than 12 feet but not exceeding 24 feet in height, anchor the sill plate to the supporting foundation wall with 1/2-inch diameter anchor bolts spaced a maximum of 3 feet on center.

\textsuperscript{i} Where the sill plate of the frame wall bears on the supporting floor framing, it shall be fastened to the rim board through the subfloor using 8d common (3-1/2 by 0.131) nails or equivalent fastening spaced at 6 inches on center.

\textsuperscript{j} For frame walls up to 20 feet in height, fasten the studs to the top and sole plates in accordance with Table R602.3(1). For frame walls that are more than 20 feet in height, fasten the studs to the top plate and sole plate using fastening or an approved fastener that is capable of supporting at least 450 pounds.

Subp. 2. [Repealed, 44 SR 764]

1309.0613  [Repealed, 39 SR 91]

1309.0702  SECTION R702, INTERIOR COVERING.

    Subpart 1.  [Repealed, 44 SR 764]

    Subp. 2.  IRC section R702.7 Vapor retarders.  Section R702.7 is amended to read as
follows:

    R702.7 Vapor retarders. A Class I or II vapor retarder is required on the interior side of
frame walls in Climate Zones 6 and 7. Class II vapor retarders are permitted only when
specified on the construction documents.

    Statutory Authority:  MS's 326B.02; 326B.101; 326B.106
    History:  39 SR 91; 44 SR 764

1309.0703  SECTION R703, EXTERIOR COVERING.

    Subpart 1.  [Repealed, 32 SR 12]

    Subp. 2.  [Repealed, 32 SR 12]

    Subp. 2a.  IRC Section R703.2 Water-resistive barrier.  Section R703.2 is amended to
read as follows:

    R703.2 Water-resistive barrier. One layer of No. 15 asphalt felt, free from holes and
breaks, complying with ASTM D 226 for Type I felt or other approved water-resistive
barrier shall be applied over studs or sheathing of all exterior walls. No. 15 asphalt felt
shall be applied horizontally, with the upper layer lapped over the lower layer not less
than 2 inches (51 mm). Where joints occur, felt shall be lapped not less than 6 inches (152
mm). Other approved materials shall be installed in accordance with the water-resistive
barrier manufacturer's installation instructions. The No. 15 asphalt felt or other approved
water-resistive barrier material shall overlap the flashings required in Section R703.4 not
less than 2 inches (51 mm). The No. 15 asphalt felt or other approved water-resistive
barrier material shall be continuous up to the underside of the rafter or truss top chord and
terminated at penetrations and building appendages in a manner to meet the requirements
of the exterior wall envelope as described in Section R703.1.

    Subp. 2b.  IRC section R703.4 Flashing.  Section R703.4 is amended and a subsection
is added to read as follows:

    R703.4 Flashing. Approved corrosion-resistant flashing shall be applied shingle-fashion
in such a manner as to prevent entry of water into the wall cavity or penetration of water
to the building structural framing components. Self-adhered membranes used as flashing
shall comply with AAMA 711. Fluid-applied membranes used as flashing in exterior walls
shall comply with AAMA 714. The flashing shall extend to the surface of the exterior
wall finish. Approved corrosion-resistant flashing shall be installed at all of the following
locations:

        1. Exterior window and door openings. Flashing shall be installed at the head and
sides of exterior window and door openings and shall extend to the surface of the
exterior wall finish or to the water-resistive barrier for subsequent drainage. Flashing at exterior window and door openings shall be installed in accordance with at least one of the following:

(a) the fenestration manufacturer's installation and flashing instructions. When flashing is not addressed in the fenestration manufacturer's instructions, it shall be installed in accordance with the flashing manufacturer's instructions;

(b) in accordance with the flashing design or method of a registered design professional; and

(c) in accordance with other approved methods.

2. At the intersection of chimneys or other masonry construction with frame or stucco walls, with projecting lips on both sides under stucco copings.

3. Under and at the ends of masonry, wood, or metal copings and sills.

4. Continuously above all projecting wood trim.

5. Where exterior porches, decks, or stairs attach to a wall or floor assembly of wood-frame construction.

6. At wall and roof intersections.

7. At built-in gutters.

8. Where exterior material meets in other than a vertical line.

9. Where the lower portion of a sloped roof stops within the plane of an intersecting wall cladding in such a manner as to divert water away from the assembly in compliance with Section R903.2.1.

10. At the intersection of the foundation and rim joist framing when the exterior wall covering does not lap the foundation insulation.

R703.4.1 Pan flashing of windows and doors. Pan flashing shall be installed in accordance with the fenestration manufacturer's installation and flashing instructions. Where flashing instructions or details are not provided, pan flashing shall be installed at the sill of exterior window and door openings. Pan flashing shall be sealed or sloped in such a manner as to direct water to the surface of the exterior wall finish or to the water-resistive barrier for subsequent drainage.

Exceptions:

1. Windows or doors installed in accordance with the manufacturer's installation instructions which include an alternate flashing method.

2. Windows or doors in detached accessory structures.

3. Skylights, bow or bay windows.
4. Doors required to meet accessibility requirements that would prevent the installation of pan flashing.

5. Repairs or replacement of existing windows and doors.

6. When a method is provided by a registered design professional.

Subp. 3. IRC Section R703.7. Section R703.7 is amended to read as follows:

R703.7 Exterior plaster. Installation of these materials shall be in compliance with ASTM C 926 and ASTM C 1063 and provisions of this code.

R703.7.1 Lath. All lath and lath attachments shall be of corrosion-resistant materials. Expanded metal or woven wire lath shall be attached with 11 gage nails having a 7/16-inch (11.1 mm) head or 16 gage staples, spaced at no more than 6 inches (152 mm) or as otherwise approved. Nails or staples shall penetrate wood framing support members not less than 3/4-inch (19 mm).

R703.7.1.1 Control joints and expansion joints. Provisions for the control of expansion shall be determined by the exterior plaster application designer. ASTM C 1063 Sections 7.11.4 - 7.11.4.4 do not apply.

R703.7.2 Plaster. Plastering with portland cement plaster shall be in accordance with ASTM C926. Cement materials shall be in accordance with one of the following:

1. Masonry cement conforming to ASTM C91 Type M, S, or N.

2. Portland cement conforming to ASTM C150 Type I, II, or III.

3. Blended hydraulic cement conforming to ASTM C595 Type IP, IS (<70), IL, or IT (S < 70).

4. Hydraulic cement conforming to ASTM C1157 Type GU, HE, MS, HS, or MH.

5. Plastic (stucco) cement conforming to ASTM C1328.

Plastering with portland cement plaster shall be not less than three coats when applied over metal lath or wire lath and shall be not less than two coats when applied over masonry, concrete, pressure-preservative treated wood, or decay-resistant wood as specified in Section R317.1 or gypsum backing. If the plaster surface is completely covered by veneer or other facing material or is completely concealed, plaster application need be only two coats, provided the total thickness is as set forth in Table R702.1(1).

On wood-frame construction with an on-grade floor slab system, exterior plaster shall be applied to cover, but not extend below, lath, paper, and screed.

R703.7.2.1 Weep screeds. A minimum 0.019-inch (0.5 mm) (No. 26 galvanized sheet gage), corrosion-resistant weep screed or plastic weep screed, with a minimum vertical attachment flange of 3-1/2 inches (89 mm) shall be provided at or below the foundation plate line on exterior stud walls in
accordance with ASTM C 1063. The weep screed shall be placed a minimum of 4 inches (102 mm) above the earth or 2 inches (51 mm) above paved areas and shall be of a type that will allow trapped water to drain to the exterior of the building. The weather-resistant barrier shall lap the attachment flange. The exterior lath shall cover and terminate on the attachment flange of the weep screed.

R703.7.3 Water-resistive barriers. Water-resistive barriers shall be installed as required in Section R703.2 and, where applied over wood-based sheathing, shall include two layers of a water-resistive vapor-permeable barrier. Each layer shall meet both of the following requirements:

1. A water resistance of not less than that of 60-minute Grade D paper; or a minimum hydrostatic head of 23-31/32 inches (60.9 cm) when tested in accordance with hydrostatic pressure test method AATCC 127-2008; or a minimum water transudation time of 60 minutes when tested in accordance with ASTM D-779.

2. A water vapor permeance of not less than that of No. 15 felt; or a minimum permeance rating of 8.5 gr/h.ft.² in Hg (US perm) (4.9 x 10⁻¹⁰ kg/Pa.s.m²) when tested in accordance with Procedure B of ASTM E96.

**Exception:** One layer of water-resistive barrier complying with R703.2 is permitted when a drainage space that allows bulk water to flow freely behind the cladding is provided.

R703.7.4 Application. Each coat shall be kept in a moist condition for at least 48 hours prior to application of the next coat.

**Exception:** Applications installed in accordance with ASTM C 926. The second coat is permitted to be applied as soon as the first coat has attained sufficient rigidity to receive the second coat.

R703.7.5 Curing. The finish coat for two-coat cement plaster shall not be applied sooner than seven days after application of the first coat. For three-coat cement plaster, the second coat shall not be applied sooner than 48 hours after application of the first coat, except as required in Section R703.7.4. The finish coat for three-coat cement plaster shall not be applied sooner than seven days after application of the second coat.

Subp. 3a. [Repealed, 39 SR 91]
Subp. 4. [Repealed, 32 SR 12]
Subp. 5. [Repealed, 32 SR 12]
Subp. 6. [Repealed, 32 SR 12]
Subp. 7. [Repealed, 32 SR 12]
Subp. 8. [Repealed, 32 SR 12]
IRC Section R807.1 is amended as follows:

**R807.1 Attic access.** Buildings with combustible ceiling or roof construction shall have an attic access opening to attic areas that exceed 30 square feet (2.8 m²) and have a vertical height of 30 inches (762 mm) or greater. The vertical height shall be measured from the top of the ceiling framing members to the underside of the roof framing members.

The rough-framed opening shall be not less than 22 inches by 30 inches (559 mm by 762 mm) and shall be located in a hallway or other readily accessible location. Where located in a wall, the opening shall be not less than 22 inches wide by 30 inches high (59 mm wide by 762 mm high). Where the access is located in a ceiling, minimum unobstructed head-room in the attic space shall be 30 inches (762 mm) at some point above the access measured vertically from the bottom of ceiling framing members. See Minnesota Rules, chapter 1346, the Minnesota Mechanical Code, for access requirements where mechanical equipment is located in attics.

**Statutory Authority:** MS s 326B.02

**History:** 44 SR 764

IRC Section R903.2.1 is amended as follows:

**R903.2.1 Locations.** Flashings shall be installed at wall and roof intersections, wherever there is a change in roof slope or direction and around roof openings. A kick-out flashing shall be installed to divert the water away from where the eave of a sloped roof intersects a vertical sidewall. The kick-out flashing on the roof shall be a minimum of 2-1/2 inches (63.5 mm) long. Where flashing is of metal, the metal shall be corrosion-resistant with a thickness of not less than 0.019 inch (0.5 mm) (No. 26 galvanized sheet).

**R903.2.1.1 Existing buildings and structures.** Kick-out flashings shall be required in accordance with Section R903.2.1 when re-siding or simultaneously re-siding and re-roofing existing buildings and structures.
Exception: Kick-out flashings are not required when only re-roofing existing buildings and structures.

1309.0905 SECTION R905, REQUIREMENTS FOR ROOF COVERINGS.

Subpart 1. IRC section R905.2.1. Section R905.2.1 is amended as follows:

R905.2.1 Sheathing requirements. Asphalt shingles shall be fastened to solidly sheathed decks or 1-inch thick nominal wood boards.

Subp. 2. IRC section R905.2.8.5. Section R905.2.8.5 is deleted in its entirety.
