

Affirmation for Construction

Title: Affirmation for Automatic Sprinkler System

Document ID: AFF-BPR-2026-04

Effective Date: January 02, 2026

This affirmation is issued in accordance with the Guidance Document titled “Affirmations for Construction – Purpose and Expectations,” and applies to public buildings and state licensed facilities as defined therein.

The licensed certification on this code data sheet confirms that I, or those under my direct supervision, have visually inspected the readily accessible portions of the automatic sprinkler system identified in the construction documents submitted for plan review.

I affirm, to the best of my knowledge based upon visual observation of readily accessible areas, that the automatic sprinkler system is installed in the areas indicated on the construction documents.

I further affirm that, should any portion of the building be found to lack an automatic sprinkler system as represented in the submitted documents, the owner has been informed that the scope of work may require modification to include provisions for a code compliant building, should actual field conditions differ from those documented in the survey.
