Minnesota Dual-Training Pipeline
Competency Model for Advanced Manufacturing
Occupation: Machinist/CNC Operator

Employer-Specific Requirements

Occupation-Specific Competencies

General Housekeeping & Maintenance
Preventative Maintenance / Tooling
Maintenance
Benchwork and Hand Tools

Level 1
Manual Milling
Turning Operations
Grinding Skills
CNC Turning
CNC Milling
Inspection Practices

Level 2
Adv. Turning
Adv. Grinding Skills
Adv. CNC Turning
Adv. CNC Milling
EDM - Wire/Plunge
Adv. Inspection

Industry-Sector Technical Competencies

Industry-Wide Technical Competencies

Machining
Introduction
Blueprint Reading
Shop Math and Measurement
CNC Turning
CNC Milling
CNC Setup and Programming Basics
Machine Tool Theory
Molding
Metallurgy
Inspection

Manufacturing Process Design & Development
Production
Maintenance, Installation and Repair
Supply Chain Logistics
Quality Assurance, Continuous Improvement
Sustainable and Green Manuf.
Safety, Health Security and Environment
Root Cause Analysis
CAD Intro

Business Basics
Teamwork
Adaptability and Flexibility
Technical Work Instructions
Planning and Organizing
Problem Solving, Decision Making
Working with Tools, Technology
Checking, Examining and Recording
Sustainable Practices

Academic Competencies

Science
Basic Computer Skills
Mathematics
Reading and Writing
Communication: Listening & Speaking
Critical & Analytic Thinking
Information Literacy

Personal Effectiveness Competencies

Interpersonal Skills
Integrity
Professionalism
Initiative
Dependability and Reliability
Lifelong Learning

Based on: Advanced Manufacturing Competency Model Employment and Training Administration, United States Department of Labor, April 2010.

* Pipeline recommends the Industry-Sector Technical Competencies as formal training opportunities (provided through related instruction) and the Occupation-Specific Competencies as on-the-job training opportunities.
Machinist/ Computer Numerical Control (CNC) Operator -  
A machinist/CNC Operator oversees the CNC machines that shape parts from metal or plastic. They must interpret blueprints, part manuals and other work instructions. They also study sample parts to determine dimensions of finished work pieces and equipment setup requirements. They set the machine and load it with the correct cutting tools. Machinists inspect work piecesthroughout a production run. In addition, machinists measure and mark dimensions and reference points on material or work pieces as a guide for subsequent machining. Machinists additionally clean and perform basic preventative maintenance functions on machines, tooling equipment and parts. They must work safely to prevent on-the-job injuries, which includes wearing personal protective equipment such as safety glasses. They also inspect cutting tools for sharpness and usability. These professionals additionally detect malfunctions using precision measuring instruments such as micrometers, dial calipers, depth gages, machine indicators and scales.

Industry-Sector Technical Competencies

- **Machining Introduction** – Learn basic machining operations including safety, MSDS, measuring tools and use of drill presses and band saws.
- **Blueprint Reading** – Knowledge in reading and understanding industrial prints.
- **Shop Math and Measurement** – Training in basic math including linear measurement, metrics and beginning algebra.
- **CNC Turning** – Training in how to operate a lathe including types of chucks, cutting tools, speeds and feeds, tool care, threads, part production and general inspection.
- **CNC Milling** – Learn mill operation including clamping, tools and holders, speeds and feeds, cutting depths/width along with direction.
- **CNC Setup and Programming Basics** – Exposure to manual programming of Computer Numerical Control (CNC) machine tools. Learn types of CNC controls, machinery, programming formats and basic terminology.
- **Machine Tool Theory** – Learn to complete the processes required for manufacturing a precision part, use standard shop safety practices, set-up and operate standard manufacturing machines, complete accurate lay-outs, explain applications of hand tools and use correctly and use basic measuring tools.
- **Molding** – Understand the fundamentals of injection molding technology.
- **Metallurgy** – Know the basic principles of metals, the behavior of metals and the processes which affect them, as well as the most common metals used in industrial processes.
- **Inspection** – Know the proper methods and instruments used to effectively inspect parts in the shop, including using instruments such as the caliper, micrometer, and CMM.
Occupation-Specific Competencies

- **General Housekeeping and Maintenance** – Demonstrate the ability to maintain tools and machinery with basic cleaning and maintenance procedures.

- **Preventative Maintenance / Tooling Maintenance** – Practice industry approved procedures for conducting preventative maintenance on machines and tools.

- **Benchwork and Hand Tools** – Knowledge of the various tools, methods, and procedures for common machine shop benchwork and hand tool work.

**Level 1 Machinist**

- **Manual Milling** – Display basic operation of the vertical and horizontal milling machines and the ability to use cutting tools and holders, setups, spindles and arbors, work holding methods.

- **Turning Operations** – Demonstrate basic lathe applications such as understanding turning safety, calculating speeds and feeds, using various tools and tool holders, identifying basic tool geometry, and the use of common lathe spindle tooling.

- **Grinding Skills** – Use surface grinders with proper set up techniques and grinding processes.

- **CNC Turning** – Demonstrate CNC lathe operations, control functions, the letter address system, the program format, and machine setup.

- **CNC Milling** – Demonstrates the fundamentals of CNC machining processes with skills in work holding, speeds and feeds for various materials and functions and understanding of capabilities of CNC machining tools.

- **Inspection Practices** – Demonstrate the proper methods and instruments used to effectively inspect parts in the shop, including using instruments such as the caliper, micrometer, and CMM.

**Level 2 Machinist**

- **Advanced Manual Milling** – Use mill for advanced techniques such as squaring a block, perform angle layouts with various methods including a sign bar. Perform simple keyset and slotting operations.

- **Advanced Turning** – Ability to operate lathe for advanced processes such as form radius, single-point isometric threads, turn spherical radius, use a radius gauge, as well as advanced taper techniques and work support devices.

- **Advanced Grinding Skills** – Demonstrate advanced techniques of grinding including use of sine bars and chucks, sine bars, gage blocks, wheel balancers, various grinding wheels and diamond dressers.

- **Advanced CNC Turning** – Able to perform advanced techniques of CNC lathe including turning with an offset talk stock and boring functions.

- **Advanced CNC Milling** – Use advanced techniques of setting-up and operating CNC milling machines including principles of clamping and locating work piece, selection of
cutting tools and holders along with use of rotary tables. Demonstrate pocketing slotting and key seat techniques as well as edging techniques.

- **EDM – Wire/Plunge** – Know how to prepare, operate, and maintain the wire EDM machine. Create basic G-code without the use of CAM software.
- **Advanced Inspection** – Able to use measuring instruments relating to state-of-the-art manufacturing environments, such as coordinate measuring machine and calibration. Understanding of Quality Control, TQM, and SPC processes as they relate to manufacturing environments.

### Machinist/CNC Operator Occupational Competency Training Plan

*Related Instruction means an organized and systematic form of instruction designed to provide the dual trainee with the knowledge of the theoretical and technical subjects related to the dual trainee's trade of occupation, or industrial courses or, when of equivalent value, by correspondence, electronic media, or other forms or self-study approved by the commissioner.*
